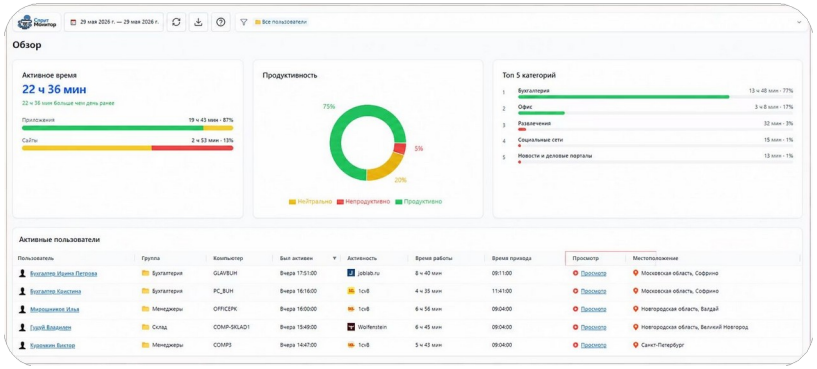
OctoWatch Монитор



Work time, productivity, and data-loss risk — in one platform

https://octowatchdlp.com

When work is opaque, the business loses money

Lost time, weak discipline controls, and late incident detection directly hurt business outcomes.

Lost time

Employees spend work hours on non-work tasks — without a system, you cannot see it.

Weak discipline control

Late arrivals, early leaves, and idle time go unnoticed without automated tracking.

Late incident detection

Violations surface after the fact, when damage is already done.

Fragmented tools do not give you the full picture

Timesheets, manual checks, and point tools show fragments but do not help you manage the whole situation.

- Timesheets hide context
- Manual control does not scale
- No single view of time and risk

OctoWatch DLP unifies UAM and DLP in one product

Time tracking, analytics, activity control, and incident investigation run in one platform.

Work time tracking: late arrivals, early leaves, overtime

Analytics: identify top and bottom performers and departments

Control data channels: web traffic, file operations, and removable media

Investigations: screen video of everything the user did on the PC

https://octowatchdlp.com

Modern endpoint DLP

Grabbers collect data, the server or cloud processes events, and the Web Console delivers analytics, control, and investigations.

Grabber (agent) collects data

Installs on workstations or terminal servers and records all user activity.

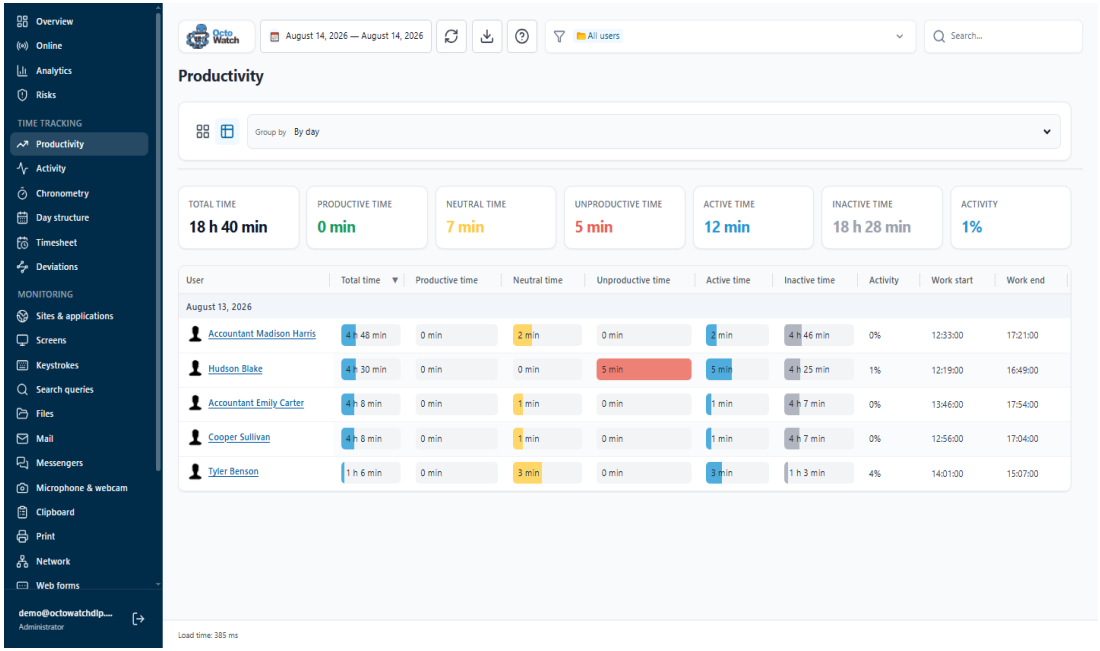
Server or cloud processes events

Central processing and storage on your hardware (On-Premise) or in our cloud.

Access via Web Console

Analytics, control, and investigations in one browser UI on any device.

https://octowatchdlp.com



Business gains transparency and control

Leaders see how work time is used, where productivity drops, and which teams need attention.

Compare people and departments

Objective metrics for every user and team, side by side.

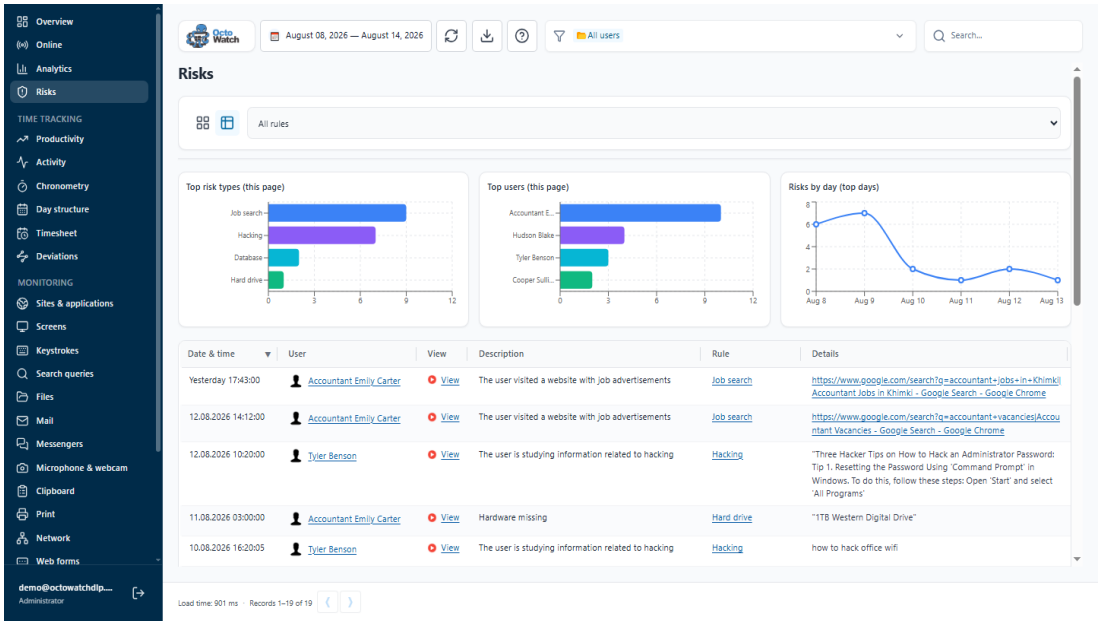
Productivity trends are visible

Trends and deviations surface automatically — no manual analysis.

A basis for management decisions

Data, not guesswork, supports leadership calls.

https://octowatchdlp.com



Security and IT get risk control and evidence

The platform helps detect suspicious activity, investigate incidents, and respond faster.

User activity capture

Full activity history on every workstation.

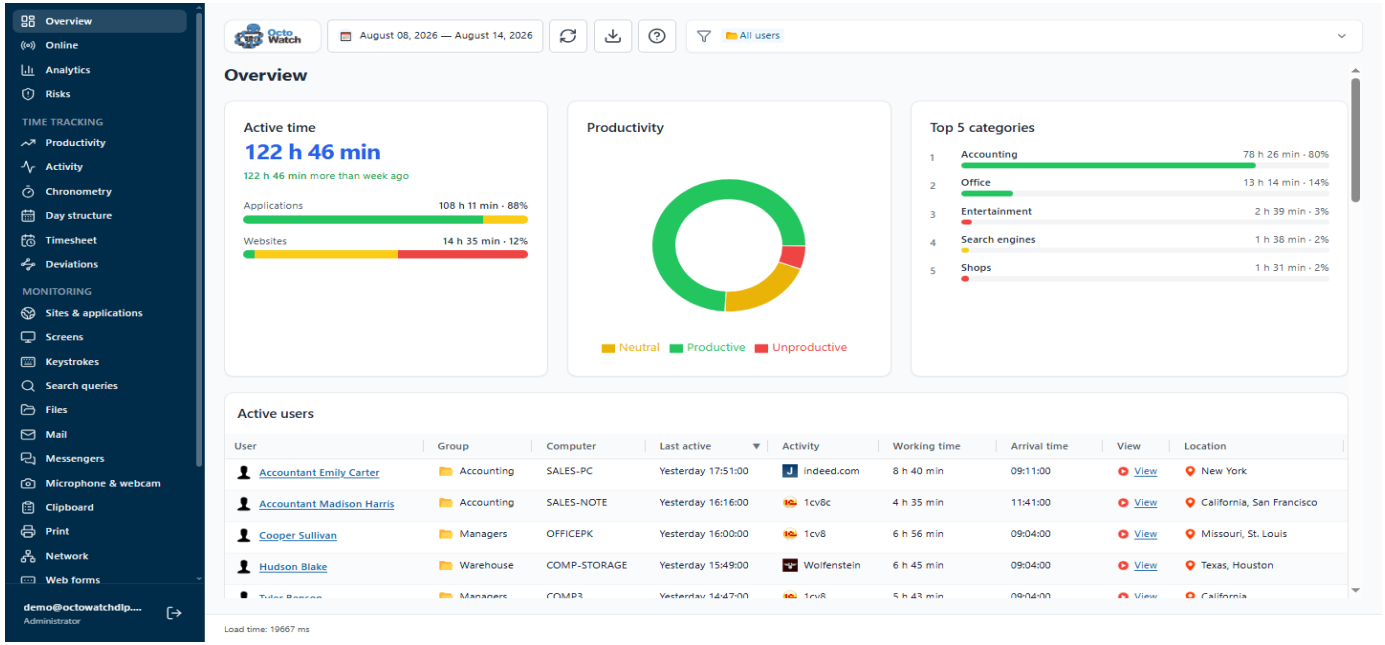
Suspicious activity detection

Automated rules and alerts on policy violations.

Evidence for investigations

Screenshots, video, logs, and event records for case review.

https://octowatchdlp.com



Online monitoring shows what is happening right now

Current user activity, workstation status, and quick remote control access in one view.

Current user activity

See what each employee is doing in real time.

Remote control in one click

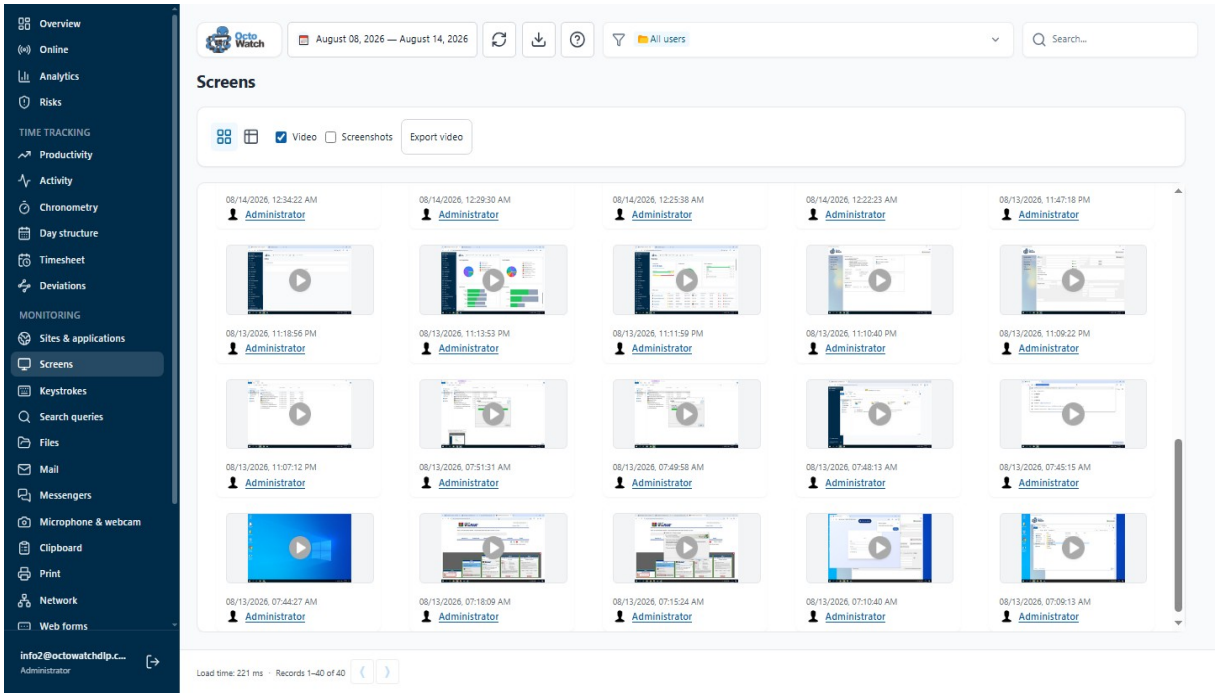
Open the user's desktop and take control without third-party tools.

Microphone or webcam access

Verify the employee is at their desk and engaged in work.

https://octowatchdlp.com

Screen video recording



Frame rate

From 1 frame per second, configurable for your use case.

Configurable retention

Flexible archive depth for recordings.

Linked events

Video is tied to the user's activity timeline.

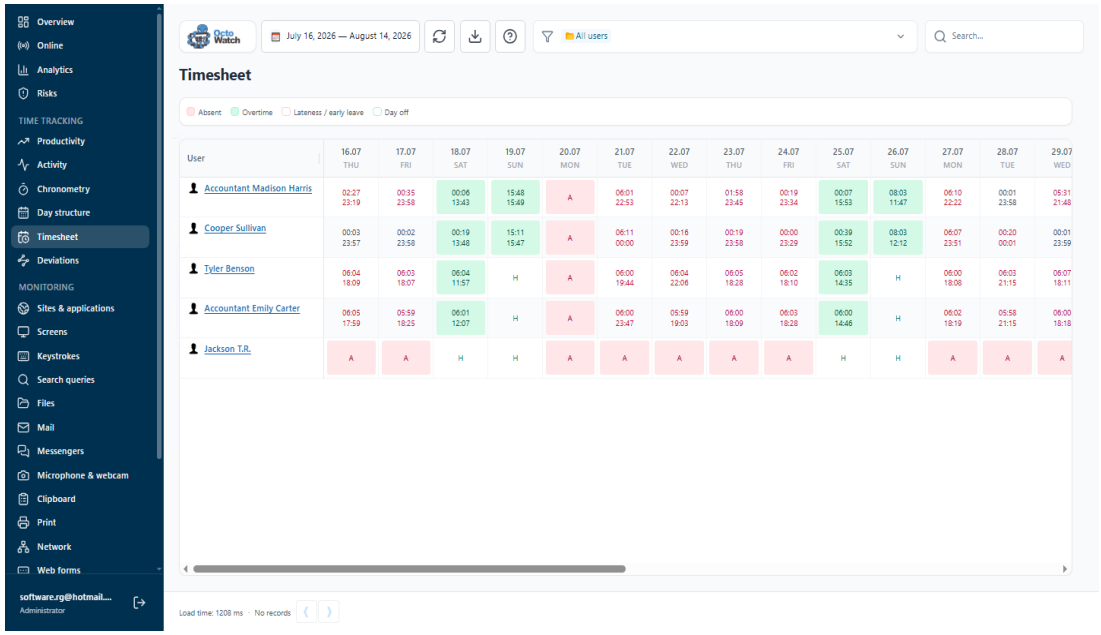
Export

Download or email recordings for investigations and reports.

https://octowatchdlp.com

Time tracking becomes a management tool

Timesheets, attendance, overtime, and deviations support decisions — not guesswork.



1

Timesheet and attendance

Automatic clock-in/out without manual entry.

2

Late arrivals and early leaves

Schedule deviations are logged and reported.

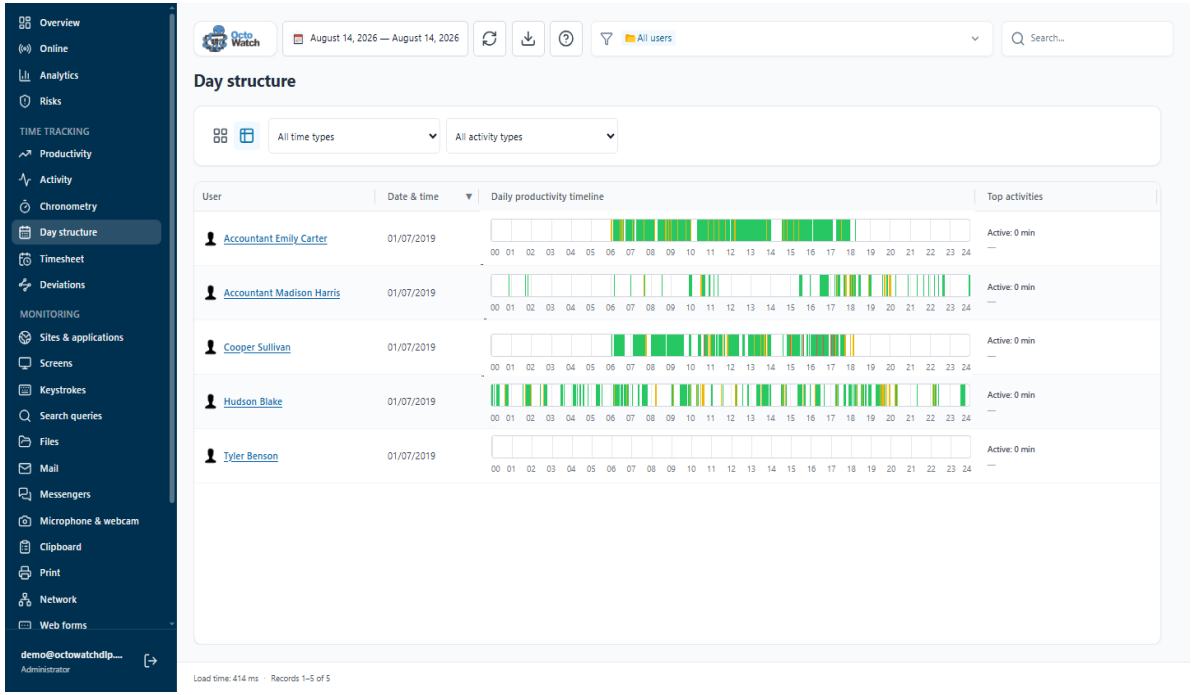
3

Overtime and idle time

Full picture of how each employee uses work time.

https://octowatchdlp.com

Productivity can be measured from actual behavior



Day structure and chronometry show what the user worked on and where time is lost.

Day structure

Visual map of the workday by activity and time block.

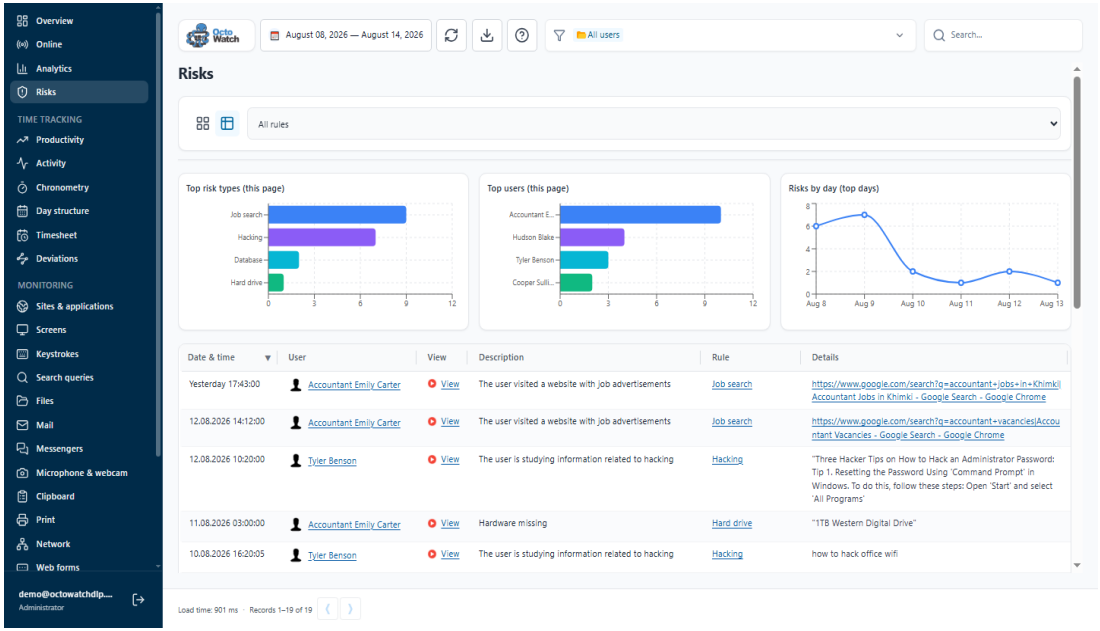
Chronometry

Exact time in each application or website.

Apps and websites

Categorize resources as productive or unproductive for fair scoring.

https://octowatchdlp.com



Risks are detected automatically, not after the fact

Rules, alerts, and blocking scenarios help you respond faster to unwanted actions.

1

Rules and scenarios

Flexible conditions for any security policy.

2

Notifications

Instant alerts to owners when rules fire.

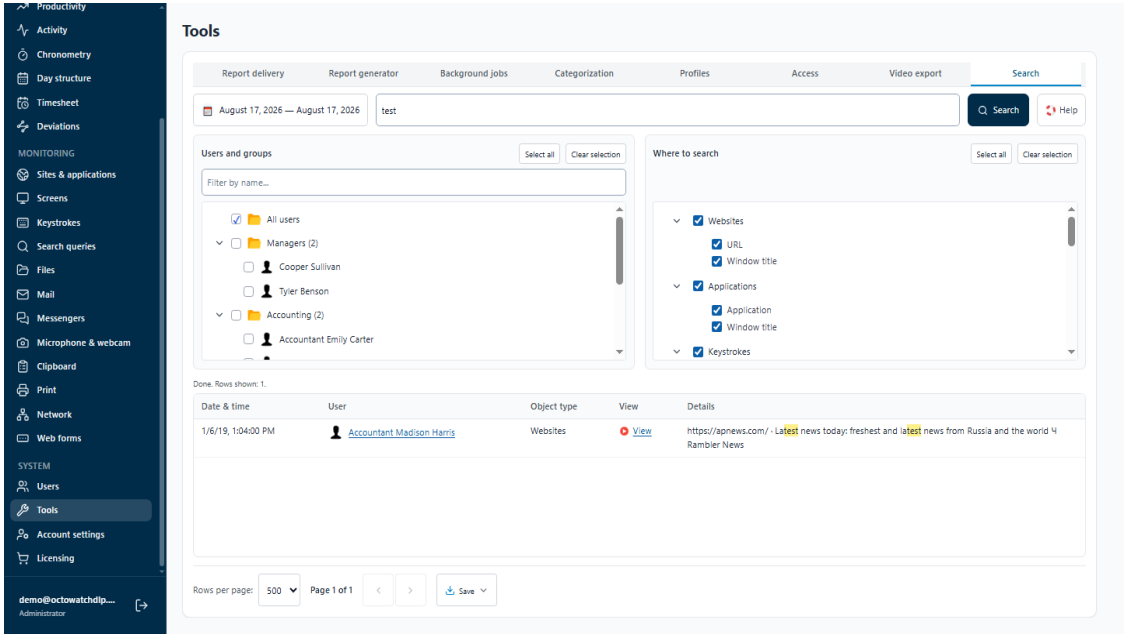
3

Blocking when needed

Automatic access restrictions on critical events.

https://octowatchdlp.com

Every action can be verified and replayed from events



Files, mail, messengers, print, and other channels build evidence for incident review.

Files and mail

Track file transfers and email on corporate channels.

Messengers and print

Monitor IM threads and documents sent to printers.

Screenshots, video, and keystrokes

Visual and text evidence of user actions.

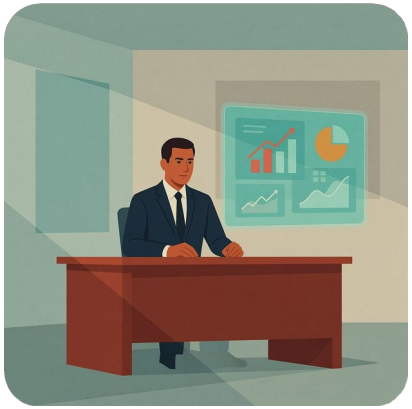
Search across data

Fast search over the full event store for investigations.

https://octowatchdlp.com

One product serves every role and replaces a patchwork of tools

Owners, managers, HR, security, and IT use one system.

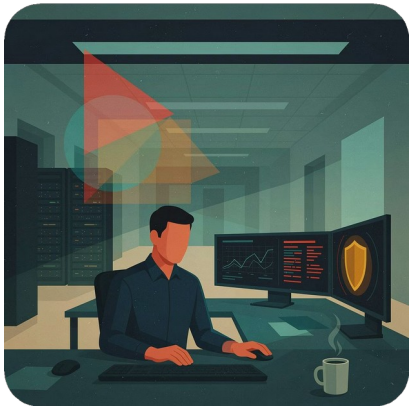


Owner

Business transparency and control over resources.

HR

Discipline, attendance, and people decisions.



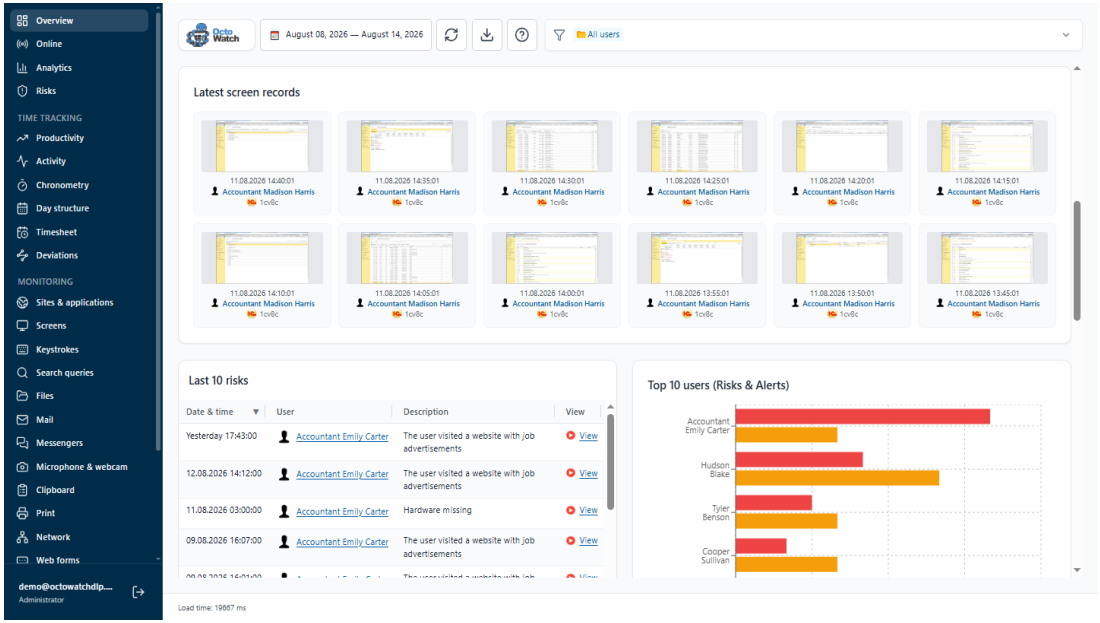
Security

Incident investigations and evidence.

IT

Workstation oversight and remote control.

https://octowatchdlp.com



After rollout, the company sees measurable impact

More visibility, accurate time tracking, better control, and faster incident response.

Fewer blind spots

Full visibility into work at every level.

More accurate time tracking

Automatic timesheets without manual errors.

Faster incident response

Automated alerts shorten reaction time.

Flexible deployment for your infrastructure and scale

Cloud and on-premise editions, licenses by active user count and term.

Cloud

Quick start with no infrastructure — subscription billing.

On-Premise

Deploy on your server with full data control.

Licenses are not tied to hardware

Scale from 1 to 1000+ users. Add licenses anytime.
